

Dear Resident,

Investigation work in your area

From Wednesday 22nd March 2023, a utility investigation team will be surveying the road carriage way in your area – please refer to the map on the back. This work will be carried out in two phases during the months of March/April and take approximately 3 to 4 weeks of field work during these two months.

Dates: 22 March 2023 - May 2023

Road closures: Yes

Parking suspension: To be notified

Pedestrian access: Yes

What will you see and when will this be happening?

Phase One

- Data will be collected on foot by the investigation team in the cycleways using 2D and 3D equipment, and on the roadway using 3D survey equipment. This equipment will be mounted on and/or towed by a vehicle.
- This work will be carried out during daytime hours to minimise any noise disruption to residents.
- This work will require temporary traffic management to create a safe environment for the travelling public and the survey team as they move through the network.
- This work is planned to take a week to cover the full 4km of the route.

3D survey equipment on a Polaris

Phase Two

After the data collected in phase one has been processed, the final collection phase will be undertaken. During this phase:

- Data will be collected on foot by the investigation team in the roadway and selected carparks (~20 in total) where a manhole exits, using 2D and 3D survey equipment.
- This work will be carried out during night-time hours to minimise the disruption to the travelling public.
- This work will require temporary traffic management including lane reductions and the removal of some parking spaces for an evening to create a safe environment for the travelling public and the survey team as they move through the network.
- This work is planned to be undertaken in April and will take one to two weeks to cover the full 4km of the route. A further letter drop will be carried out closer to this work being undertaken which will also confirm what carparks will be needed.

Weather

In the event of unsuitable weather or other circumstances, the plan for work may change. If a no parking notice has been issued, a new notice will be issued at least 48 hours prior to any new date.

Traffic/Parking

To ensure the survey can be completed as efficiently as possible, roadside parking will not be available in ~20 parks where manholes exist.

These will be marked with "No parking" cones on the day which will be removed as soon as the investigation works are complete.

Please note – any vehicles obstructing work areas or traffic may be towed to a nearby suitable area. If your vehicle is not where you parked it, please call the WCC Contact Centre 04 499 4444.

Disruption

We appreciate this investigation work may be disruptive for residents and/or businesses. We will be doing all we can to minimise the impact on your household and/or business. Your cooperation and patience are much appreciated and will help us get the job done as quickly as possible.
