

EAST WEST LINK MĀNGERE INLET FORESHORE SECTION

B EAST WEST LINK TREATMENT TRAIN CONFIGURATION

Currently, stormwater from the local road network and wider Onehunga – Penrose urban catchment is untreated and discharges directly into the Māngere Inlet. The project includes stormwater detention and treatment that will treat this run off along the new coastal edge. Below is a diagram that summarises this process.

Stormwater treatment process (details to be confirmed during detailed design)

ALFRED STREET BRIDGE

What the bridge could look like

COASTAL WETLANDS
