

1 MacKays to Peka Peka Expressway

Paraparaumu town centre - The details of what we are proposing 10

Description

- The expressway would cross* Raumatī Road, and then sweep eastwards out of the existing designated corridor to shift the road away from residential areas.
 - A full interchange would be located at Paraparaumu town centre, most likely on Kāpiti Road (see Poster 7). Kāpiti Road would cross the expressway.
- Upgrading options for Kāpiti Road are being examined with Kāpiti Coast District Council (KCDC).
- Between Kāpiti Road and Otaihangā Road, the expressway would follow the existing Western Link Road designation, crossing* Mazengarb Road.

* Whether the expressway crosses over or under local roads will be determined in the next stage of design

Considerations

- A connection to the developing town centre at Paraparaumu, and the growing business and commercial activities in and near Paraparaumu Airport, provides for regional growth opportunities.
- Supports KCDC's aspirations and its emerging plans for the development of Paraparaumu town centre.
- Requires additional property outside the Western Link Road designation.
- Requires flood storage which can also be an ecological wetland benefit.
- All east-west connections to be retained.

Indicative road carriageway alignment

We also considered an alignment more closely along the Western Link Road designation but the opportunity to take the route away from more houses outweighed following the designated alignment.
