

1 MacKays to Peka Peka Expressway

What we have heard you say so far

4

There has been feedback about the expressway already. This what we have heard so far...

- Existing east-west roads need to be retained either over or under the expressway.
- Connections to the expressway (interchanges) must support local people and business traffic moving about the district.
- A direct link between Waikanae and Paraparaumu is needed.
- The expressway must avoid impacts on cultural values.
- It needs to be safe and comfortable to use for everyone.
- Recreational uses must be provided for e.g. walking to and from beach, along waterways, horse riding, cycling and other activities.
- Sensitive design – take cues from the local landscape.
- Pedestrian and cycleway provision along the route.
- Avoid loss of parks and wetlands.
- Future proof and make it secure to ensure that we don't need to revisit it again.
- Support connections to rail and make it easier for buses on local routes.
- Protect health in terms of effects on schools and residential areas (e.g. noise and air quality).
- Use swales (shallow ditches) and other sustainable stormwater management tools for expressway water runoff.

Have we missed anything?
