

# HAVE YOUR SAY!

## We want your thoughts on proposed Pepe Stream Bridge replacement options

### Key benefits

- Provides a safe, accessible crossing across the Pepe Stream for all users
- The two existing bridges will be replaced
- Provides two lanes of traffic and a walking and wheeling path on one bridge
- **Medium to high cost option.**

*Once we have determined the right bridge replacement option we will need to seek additional funding for design and construction. We will let the community know as soon as details are confirmed.*

## Option 1

Proposed two lane bridge with walking and wheeling path

# HAVE YOUR SAY!

## We want your thoughts on proposed Pepe Stream Bridge replacement options

### Key benefits

- Provides a safe, accessible crossing across the Pepe Stream for all users
- The two existing bridges will be replaced
- Provides two lanes of traffic on one bridge
- Provide a cycling and wheeling path on a separate bridge

- Highest cost option.

Artist's impression of two lane bridge with separate walking and wheeling bridge

*Once we have determined the right bridge replacement option we will need to seek additional funding for design and construction. We will let the community know as soon as details are confirmed.*

New two lane bridge

Seperate walking and wheeling bridge

Possible intersection upgrade to improve safety and access

## Option 2

Proposed two lane bridge with separate bridge for walking and wheeling

# HAVE YOUR SAY!

## We want your thoughts on proposed Pepe Stream Bridge replacement options

### Key benefits

- Provides a safe, accessible crossing across the Pepe Stream for all users
- The existing two bridges will be replaced
- Provides one lane of traffic and a walking and wheeling path
- **Lowest cost option.**

*Once we have determined the right bridge replacement option we will need to seek additional funding for design and construction. We will let the community know as soon as details are confirmed.*

# WE HAVE A LOT TO THINK ABOUT WHILE WE PLAN THIS BRIDGE REPLACEMENT

## Is there anything else to consider?

Here is what we know so far:

- There is limited space for construction of a new bridge
- Maintaining access to Tairua town for everyone is crucial during construction of the bridge
- Building a bridge in a coastal environment requires strict environmental controls
- The new bridge will likely need to have supports in the water.

Area of significance to iwi

25

Raising of the bridge at the north side will be required

Existing overhead powerlines

Existing footbridge and its use for recreational activities

Existing utilities on footbridge

Temporary vehicle and pedestrian bridge may be required during construction

Consideration of coastline and trees

*The design of the preferred bridge, including what it looks like and how many supports it will have, is not confirmed.*

Once we have determined the right bridge replacement option we will seek additional funding for design and construction. We will let the community know as soon as details are confirmed.
