

# TAIPA BRIDGE

## THE PROPOSAL

A concept design has been developed showing how the project is likely to work. It is based on discussions with iwi and the Northland Regional Council, and technical reviews.

The basic elements are:

- Remove the existing bridge and replace it with a new bridge next to it, upstream
- Build a new bridge with two traffic lanes and a shared path for pedestrians and cyclists
- Provide a swimming platform for kids in a similar location to where it is now
- Add improvements in the township with a focus on creating safe speeds

Your feedback on the concept will help us to develop a preferred option. In particular, we're keen to understand how you think we can improve the township.
