

**TNZ M/20 NOTES: 2003**

**NOTES TO THE SPECIFICATION FOR LONG-LIFE ROADMARKING MATERIALS**

*(These notes are intended for the guidance of supervising officers and are not to be included in the contract documents.)*

The long-life materials listed below have provisional approval for use on state highways. There are two grades of approvals which are:

1. Approval for use on all road surfaces; and
2. Approval for use only on smooth textured surfaces such as asphaltic concrete, (both dense and open grade) and slurries but **not** on coarse textured surfaces such as chipseals.

Approvals for all yellow markings appraised under M/20:1994 expire on 30 August 2004, unless evidence of compliance with test results is presented, according to clause 8.1 of M/20:2003, that the material colour complies with the yellow colour requirement of M/20:2003. Evidence of compliance may be:

- A copy of the original report prepared under M/20:1994, which shows compliance with the yellow colour requirement of M/20:2003, or,
- A signed laboratory report that the material colour complies with the yellow colour requirement of M/20:2003.

**Table 1: Provisional Approval for Long-Life Roadmarking Materials**
