

New temporary traffic lights at Te Maunga SH2/SH29A intersection

New temporary traffic lights will soon be operational at the Te Maunga SH2/SH29A intersection.

The existing roundabout will be replaced by a signalised intersection, which includes a pedestrian crossing controlled by traffic signals.

Temporary traffic lights are being introduced to provide space for retaining walls of the SH2/SH29A interchange bridge to be built.

Motorists are advised to allow extra time when travelling, especially during morning and evening peak times.

Signage will advise road users of the new layout and temporary speed limits. Please drive with caution and take care while adjusting to these changes.

The temporary traffic lights will be in place while work on the new SH2/SH29A interchange bridge is underway.

The map provides an indication of the layout of the new temporary signalised intersection.
