

# The Groynes

If you are one of the many people who head to The Groynes in your down time you will have noticed the new look entrance, which opened to traffic in June.

Traffic now travels under the Groynes Drive Overpass Bridge and through a new roundabout.

The Groynes, including the swingbridge and walking tracks, is now fully open.

Thanks for your patience and understanding as we worked around this area.

## Cycling and walking

The Transport Agency is committed to delivering high-quality pedestrian and cyclist networks, which provide a healthy, economic and environmentally friendly travel option for the community.

There will be no cycling on the bypass once it opens to traffic, however adjacent to the motorway we have built cycling and walking facilities as part of the project. This will allow people to connect to existing facilities in the area.

A 300 metre shared path has also been constructed in the southern part of the project, linking into walking and cycling facilities on the Johns Road - Groynes to Sawyers Road section of the Western Corridor. This connects to the new shared path on Groynes Drive and provides walking and cycling connections to The Groynes.

## Otukaikino Track Subway

A new subway linking the Waimairi Walkway and the Otukaikino Track opened in August 2017. The subway will take pedestrians under the new motorway. A stylised aerial view of the Waimakariri River features on its walls - a design element that has been used throughout the project.

### Subway facts

The Otukaikino Track Subway carries the Bypass over the Otukaikino Track walkway.
