

# The options

## Whirokino Trestle and Manawatu River Bridge

The Transport Agency is considering four potential options for replacing the Whirokino Trestle and strengthening or replacing the Manawatu River Bridge.

- Options 1 and 1A involve replacing both bridges on new alignments away from the existing bridges.
- Options 2 and 2A involve replacing Whirokino Trestle alongside the existing structure. Option 2 involves replacing the Manawatu River Bridge alongside the existing structure, while Option 2A involves upgrading and strengthening the existing river bridge.

We will assess these options against the current situation of ongoing maintenance of both bridges.
