

land transport at a glance

Auckland City

Map of the Auckland Region

What is *Land Transport At A Glance*?

Land Transport At A Glance provides a brief overview of the state of the land transport system.

What does *Land Transport At A Glance* contain?

It contains key data that describes the contribution that land transport makes to the government's economic, social and environmental objectives for transport.

What is its purpose?

Land Transport At A Glance provides all approved organisations with an evidence base for decision-making.

Why do this?

The key strategic driver for providing data is the government's requirement that we be evidence-based and outcomes focused.

Timing

The release of *Land Transport At A Glance* coincides with the publication of the *National Land Transport Programme* (NLTP) by Land Transport NZ on 28 June 2006.

What are the limitations of the data?

This package is based on available data. There are gaps, which will be filled as quickly as possible. Where data does not presently exist, we will work with sector partners to obtain the data through research and other means.

Where does the data come from?

We have compiled data from a wide variety of sources and we will continue to refresh it from these sources. Sources of data have been stated under the graphs.

Is more data available?

A lot more data is available. A document containing detailed information about land transport is presently being prepared for release in December 2006.

Moving forward

In the long term the intention is to:

- publish *Land Transport At A Glance* each year in June to coincide with the release of the NLTP
- have land transport data available through Land Transport NZ's website.

Where can I get more information?

More information is available from the manager of performance information at your local Land Transport NZ office.

What if I have feedback?

Please contact the manager of performance information at your local Land Transport NZ office. We are keen to receive your feedback so that improvements can be made.

How do I contact land Transport NZ offices?

Auckland City Auckland Region

Statistics for 2005

	Territorial Authority (TA)	Region	National	TA as % of region	Region as % of nation
Population ^D	425,400	1,337,100	4,098,900	32%	33%
Land area (km ²) ^D	1,059	5,600	275,446	19%	2%
Imports (gross tonne) ^{1 D}		11,237,000	-		18%
Exports (gross tonne) ^{1 D}		8,182,000	-		11%
Gross domestic product (GDP) (\$) ^M		46,892,000,000	148,551,000,000		32%
Total TA expenditure on land transport (\$) ^{T J}	60,909,000	209,996,000	873,924,000	29%	24%
Passenger transport - bus boardings ^J		43,054,000	86,666,000		50%
Passenger transport - rail boardings ^J		3,798,000	14,255,000		27%
Passenger transport - ferry boardings ^J		3,846,000	4,082,000		94%
Motor vehicles ^D	330,388	892,291	2,790,610	37%	32%
VKT (km) ^{V J}	2,721,000,000	11,401,000,000	38,874,000,000	24%	29%
Is congestion an issue?	Yes #				
Social cost (\$) ^D	255,800,000	792,500,000	3,554,000,000	32%	22%
Deliveries of petrol & diesel (litres) ^D			6,075,000,000		
Energy use by transport (petrol + diesel) (MJ) ² [in 2004] ^D			186,800,000,000		
CO ₂ emissions from land transport (tonnes) [in 2004] ^D			12,505,000		
Local roads - all urban (km) ^J	1,262	4,125	16,820	31%	25%
Local roads - sealed urban (km) ^J	1,252	4,099	16,423	31%	25%
Local roads - all rural (km) ^J	157	3,583	65,434	4%	5%
Local roads - sealed rural (km) ^J	56	2,408	32,819	2%	7%
State highway - all (km) ^{4 J}		326	10,894		3%
State highway - sealed (km) ^{4 J}		326	10,838		3%
State highway - motorway (km) ^J		106	172		62%

¹ indicative only - based on 2002 data. This includes both inter-national and inter-regional freight movement.

² 1 MJ = 1 mega-joule = 10⁶ joules

^D indicates year ending Dec; ^M indicates year ending June; ^J indicates year ending March.

^T Total expenditure covers local and national contributions to territorial authority expenditure. Regional Council and Transit NZ costs are excluded.

^V TA VKT = local roads. Regional and national VKT includes local roads and state highways

The AM peak congestion is the heaviest, followed by the PM peak. In the Interpeak period many Auckland roads flow quite smoothly, and this is reflected in the relatively high actual travel speeds. The combination of areas of heavy congestion and relatively high variability results in significant variations in trip times.

Population

Population estimates for Auckland City

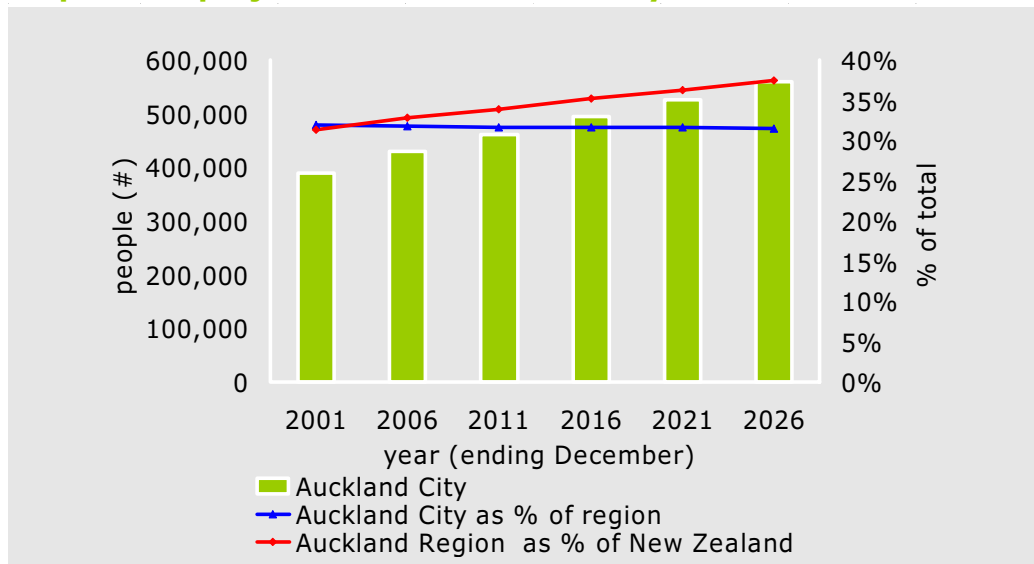

Source: Statistics NZ

Growth rates:

(average per annum for years shown)

Urban Area - Central Auckland Zone	2.35%
Auckland City	2.35%
Auckland Region	2.47%
New Zealand	1.41%
