Information for year ending Dec 2006

Purpose of this publication

Land Transport New Zealand annually publishes comparative information on the safety of New Zealand roads. The information in this publication has been collected through the Crash Analysis System (CAS) which is an integrated system providing tools to analyse crash data and related data. It has a mapping capability integrated with a querying and reporting capability.

The information held within CAS includes precise location, which allows the importance of location to be determined (for example, in "black-spot" analysis) and also allows a comparison between local authorities.

This publication is available on the Land Transport NZ website, under *Performance of Land Transport* (<http://www.landtransport.govt.nz/performance/index.html>)

Data/Graphs

Because of the volume of information data and graphs have been published in separate documents, both available from the same website.
