

# road safety issues

July 2003

The Land Transport Safety Authority (LTSA) has prepared this road safety issues report. It is based on reported crash data and trends for the 1998–2002 period. The intent of the report is to highlight the key road safety issues and to identify possible ways to reduce the level of road deaths and injuries in the Waikato Region.

‘The data contained in these reports gives us a good picture of the level of trauma that has been happening on our roads over the past five years. However, lives are saved through the commitment of road safety partners who are focusing collaboratively on why road crashes occur, and then working with communities and industry to address these issues. Road safety partnerships have been instrumental in achieving the road safety gains made to date on our roads. Commitment to the strengthening of road safety partnerships will be essential if we are to achieve the 2010 road trauma targets.’

Glenn Bunting  
LTSA Regional Manager  
Waikato and Bay of Plenty

## Major road safety issues

### Waikato Region

Poor observation

Failure to give way

Speed

Restraints and helmets

### Nationally

Speed

Drink-driving

Failure to give way

Restraints

## 2002 road trauma for Waikato Region

Deaths	64
Serious casualties	278
Minor casualties	1,243
<hr/>	
Fatal crashes	59
Serious injury crashes	222
Minor-injury crashes	829
Non-injury crashes	2,317

## Regional crash causes 1998–2002

## Estimated social cost of crashes\*

\* The estimated social cost includes loss of life or life quality (estimated by the amount New Zealanders are prepared to pay to reduce their risk of fatal or non-fatal injury), loss of output due to injuries, medical and rehabilitation costs, legal and court costs, and property damage. These costs are expressed at June 2002 prices.

## When crashes occurred

Crashes resulting in injury can occur at any time, but in the Waikato Region between 1998 and 2002, Friday and noon–4 pm were the worst periods.

Day of week for crashes 1998–2002

Time of day for crashes 1998–2002

## Where crashes occurred

During the 1998–2002 period, approximately 88 percent of fatal crashes (where one or more people were killed) and 59 percent of injury crashes occurred on rural roads. In rural areas there is a greater chance of a fatal crash occurring than in an urban area, due to the higher speed limits.

Location of crashes 1998–2002

## Who was involved in crashes

Between 1998 and 2002, 8,082 people were injured on Waikato Region roads. Drivers accounted for 52 percent of people injured and passengers 30 percent.

Other key road-user groups represented among those injured in this period included motorcyclists (six percent), cyclists (three percent) and pedestrians (five percent).

### Licence status of all drivers involved in injury crashes in 2002

Licence status	Urban crashes	Rural crashes
Full licence	54%	65%
Learner or restricted	20%	17%
No or wrong licence	15%	4%
Forbidden or disqualified	1%	2%
Overseas	3%	5%
Unknown	7%	7%

### Ethnicity status of all drivers involved in injury crashes in 2002

The collection of ethnicity information commenced in late 2001 via the traffic crash reports completed by the New Zealand Police.

In 2002, the largest ethnic group involved in crashes in the Waikato Region was New Zealand European. However, when considering the ethnicity of those involved in crashes in the Waikato Region compared with all New Zealand and with similar regions, the following ethnic group was over-represented in 2002:

- New Zealand Maori in rural crashes.

Ethnicity status	Urban crashes	Rural crashes
NZ European	64%	60%
NZ Maori	24%	27%
Cook Islander	1%	1%
Samoan	1%	2%
Tongan		1%
Asian	5%	5%
Other	4%	3%

## Poor observation

Poor observation includes:

- inattention or failing to notice, eg failing to notice traffic lights while driving home on 'autopilot' and thinking about what to cook for tea
- attention being diverted, eg being distracted by children in the back seat
- not seeing or looking for another road user until too late, eg not checking behind when changing lanes, or experiencing near misses at intersections.

Nationally, not seeing or looking for other parties until too late was the third highest contributing factor in injury crashes in 2002. The total social cost of these crashes was \$552 million.

Failure to see or look for another road user until too late caused 2,128 crashes in 2002 – a greater number of crashes than those caused by either speeding or drink-driving.

In the Waikato Region, poor observation was a factor in 35 percent of injury crashes in 2002, an increase from 2001, and increasing in line with the national trend.

There were 1,489 injury crashes relating to poor observation reported in the last five years.

Poor observation was predominantly an urban issue in the Waikato Region in 2002 and was a factor in 48 percent of the injury crashes occurring on roads with a speed limit lower than 70 km/h. Poor observation has increased as a factor on urban roads over the last six years, with the number of injury crashes rising from 187 in 2001 to 216 in 2002.

The majority (46 percent) of poor observation crashes occurred at intersections.

Poor observation is a challenging issue for all road safety groups to address. In particular, thought needs to be given on how to address:

- complacency of drivers
- looking but not seeing
- roading networks that contain surprises for the inattentive driver.

# Failure to give way

Failure to give way can occur at a number of locations including:

- at intersections with Give Way or Stop signs
- at pedestrian crossings
- when entering the roadway from a driveway.

Drivers who fail to give way generally fall into the following categories:

- those who don't understand the road rules and assume they have the right of way
- those who assume the other car is going to let them through or stop (and may be travelling too fast to stop themselves)
- those who lack courtesy in relation to lane changing and merging
- those who are complacent about (or deliberately ignore) the road rules.

Nationally, failure to give way was the fourth highest contributing factor in injury crashes in 2002. The total social cost of these crashes was \$515 million.

In 2002, failure to give way caused the second highest number of crashes (2,298) after poor observation (3,676) and ahead of drink-driving and speeding.

In the Waikato Region, intersection crashes have remained steady over the last 10 years, making up 33 percent of all crashes in the region in 2002.

Fifty-five percent of urban crashes occurred at intersections in 2002 (up from 54 percent in 2001). These were typically turning and crossing type conflicts.

The main factors associated with urban intersection crashes in the Waikato Region were failure to give way or stop and not looking or seeing another party until too late.

Rural intersections accounted for a smaller proportion of crashes in the Waikato Region than urban intersections, with 19 percent of rural crashes occurring at intersections in 2002.

Black spot sites	Territorial local authority
Cobham Drive and Hillsborough Terrace intersection	Hamilton City
Cobham Drive and Tristram Street intersection	Hamilton City
Cook Street 30 metres east of Grey Street	Hamilton City
Clyde Street and Peachgrove Road intersection	Hamilton City
Victoria Street and Mill Street intersection	Hamilton City

Increasing incidence sites*	Territorial local authority
Waverley Road 1,080 metres south of Piako Road	Waikato District
Ruakura Road and Nottingham Drive intersection	Waikato District
Front Miranda Road and East Coast Road intersection	Waikato District
Abbotsford Street and Willoughby Street intersection	Hamilton City
Clyde Street 30 metres east of Firth Street	Hamilton City

\* sites with significant increases in injury crashes in 2002

# 80 Speed

Speed includes not only exceeding the speed limit, but also driving too fast for the condition of the road. No matter how good drivers think they are, speeding significantly increases the chances of crashing and serious injury or death.

- A child struck in a suburban street by a car travelling at 10 km/h over the speed limit will be killed.
- Driving at 100 km/h in light rain requires the same stopping distance as driving at 120 km/h on a sunny day.

Nationally, speed is the major contributing factor to fatal road crashes. Crashes involving excessive speed tend to be more severe and, therefore, the associated social cost is much higher.

In 1,509 crashes during 2002 the driver was travelling too fast for the conditions, resulting in a total social cost of \$768 million. Drivers travelling at excessive speed account for around 20 percent of open road crashes.

In the Waikato Region, speed was a factor in 18 percent of injury crashes in 2002. This was a decrease from 2001, and decreasing in line with the national trend.

There were 912 speed-related injury crashes reported in the last five years.

Speed was predominantly a rural issue in the Waikato Region in 2002 and was a factor in 19.4 percent of the injury crashes occurring on roads with a speed limit greater than 70 km/h. Most roads in the Waikato Region were built for 80 km/h speeds and cannot be driven safely at the open road maximum of 100 km/h.

Speed has remained steady as a factor on rural roads over the last 10 years, with the number of injury crashes falling from 146 in 2001 to 128 in 2002.

Responses from the Waikato Region to the 2002 Public Attitudes Survey indicated:

- 35 percent of drivers said that they enjoyed driving fast on the open road
- 14 percent of drivers agreed that there was little chance of a crash when speeding if they were careful
- 33 percent of drivers thought that the risk of being caught speeding was small
- 80 percent thought that enforcing the speed limit helped to lower the number of road deaths.

Speed surveys are undertaken annually throughout the country by the LTSA and it is pleasing to see that nationally both urban and rural speeds are continuing to decrease. The following graph illustrates the results of surveys undertaken in the Waikato Region over the last five years.

## Restraints and helmets

### Front seat safety belt use – adults

Wearing rates	2002
Nationally	92%
Waikato Region	94%

Responses from the Waikato Region to the 2002 Public Attitudes Survey indicated that 35 percent of those surveyed thought that the chance of an adult being caught not wearing a safety belt when driving was very or fairly likely.

### Rear seat safety belt use – adults

Wearing rates	2002
Nationally	81%
Waikato Region	76%

Responses from the Waikato Region to the 2002 Public Attitudes Survey indicated that 14 percent of those surveyed thought that the chance of an adult being caught not wearing a safety belt as a rear seat passenger was very or fairly likely.

### Cycle helmets

Wearing rates	2003
Nationally	89%
Waikato Region	93%

Since becoming compulsory in 1994, cycle helmet use has increased substantially from wearing rates of 60–65 percent in 1992/1993. In 2003 the helmet wearing rate of 89 percent was still significantly lower than the 94–96 percent wearing rates observed since 1995.

### Child restraint use

Wearing rates	2002
Nationally	86%
Waikato Region	89%

Responses from the Waikato Region to the 2002 Public Attitudes Survey indicated that 32 percent of those surveyed thought that the chance of being caught if a child under five in a back seat was not in a child restraint was very or fairly likely.

## Partnerships

The LTSA works closely with many road safety partners at national, regional and local levels. These include government departments, enforcement agencies, territorial local authorities, health authorities and local service providers.

### Road safety partnerships

Last year, seven road safety partnership groups were formed within the Waikato and Bay of Plenty Regions. These groups replicate the membership of the National Road Safety Committee at a local level.

The partnership group members collaboratively agree on the road safety risks, objectives and targets, while monitoring and reviewing road safety progress as detailed in the partners' road safety action plans.

- Road controlling authorities and regional councils develop annual community road safety action plans outlining the road safety issues and areas of risk, objectives, actions and management systems for their community education and road environment activities.
- The New Zealand Police develop quarterly road policing action plans that are used as the basis for weekly/monthly risk targeted patrol plans for frontline staff.

In February, a summary of road safety activities undertaken by road safety partners during 2002 for three of the seven areas was produced in the form of *Road safety partnerships*.

The response from those who received *Road safety partnerships* was supportive and indicated that the summary was useful and clearly identified how partners can work collaboratively in road safety activities.

# Community Road Safety Programme

## Community development

The Community Road Safety Programme (CRSP) has been developed over the last 12 years on the basis that community involvement in, and ownership of, road safety issues is essential to the success of any country's road safety strategy.

Community development for road safety is the process of identifying, and working with and within, different communities of people to assist them with becoming aware of their own local road safety issues.

Communities are supported in developing and implementing their own informed solutions to these issues through planning and co-ordination, provision of accurate and relevant road safety information and accessing funding.

## Community road safety activities for 2003/2004

Funding from the CRSP the Waikato Region for the 2003/2004 year is proposed as follows:

# Road Safety to 2010

In September 2002, the Minister of Transport announced the government's new road safety goals of achieving no more than 300 fatalities and 4,500 hospitalisations per annum by 2010. A substantial work programme was put in place to begin working towards these goals, much of it to be led in a collaborative manner by the LTSA.

The LTSA projects included in this package are:

- safety management systems (SMS) – development and promotion of the use of SMS within road controlling authority (RCA) operations
- road network performance – development of road classification, targets and measures
- Crash Analysis System (CAS) – made available for use by externals
- pedestrians and cyclists – development of a safety framework
- pedestrians and cyclists – development and promotion of best practice standards and guidelines
- safe routes – development of operational policy and guidelines for activities
- Community Road Safety Programme (CRSP) – implementation of review recommendations
- novice driver – pilot of a competency-based training and assessment programme, and a programme to encourage increased on-road driving practice with informal supervision by parent or caregiver
- driver education – campaign to reduce the number of crashes involving failure to give way
- heavy vehicles – development of a safety strategy
- truck compliance – survey of key compliance risk areas
- administrative penalties – review of penalties to enhance their safety focus and effectiveness
- performance measurement – increased surveys of speed and restraint usage
- travel surveys – provision of up-to-date travel information
- regional strategy devolution – development and promotion of strategic road safety planning guidelines for local government
- RoadSense – Ata Haere – an approach that aims to increase the amount of road safety taught by schools
- agency safety assessment – analysis of current programmes and identification of potential areas for improvement.

Updates on the progress of these projects can be obtained from either the LTSA website or the nearest LTSA Regional Office.

# New Zealand Road Safety Programme

## Road policing

As part of the development of the 2004/2005 New Zealand Road Safety Programme (NZRSP), the process by which New Zealand Police resources were allocated is being reviewed.

'In 2002, 39 people were killed on Waikato Police District roads. For the families of these people this was a great and tragic loss. However, 2002 saw the lowest number of road deaths on Waikato Police District roads since records began. This was attributed to the high profile created by the Waikato Highway Patrol and supported by strategic traffic units within the district, and also through significant co-operation from the travelling public.

The only way we can continue to drive down the number of road deaths is through strict enforcement focusing on trauma-promoting offences, continued co-operation of the travelling public and working with our partners in the territorial local authorities, Transit New Zealand and the LTSA.

If we continue to share the same vision we can reduce further the level of road carnage in our district.'

Superintendent Kelvin Powell  
District Commander  
Waikato Police District  
New Zealand Police

## Assistance from the LTSA

The LTSA Hamilton Regional Office is able to assist in road safety activities such as:

- the development of safety management systems
- crash reduction studies
- safety audits
- crash data provision and analysis
- general road engineering advice
- general road safety advice
- community development
- community programmes.

The LTSA website also contains road safety information, including electronic copies of this report and all of the others that have been produced for the country. We encourage you to visit this site: [www.ltsa.govt.nz](http://www.ltsa.govt.nz)
