1.0 DISCLAIMER

- 1) The traffic data contained in this report is intended to be used as an approximate indication of traffic loading and vehicle weights at WiM sites. The limitations of the equipment and their installation, congestion effects and various analysis procedures contribute to a level of approximation in the data. These factors should be taken into account when using the data.
The NZ Transport Agency and its employees or agents involved in preparation of this information cannot accept liability for its contents or for any consequences arising from its use. People using the contents of the report should apply, and rely upon, their own skill and judgement. The contents should not be used in isolation from other sources of advice and information.
- 2) The legal limits indicated in this report represent the highest legal gross for the axle groups depicted. In certain cases, a lower limit may apply.
- 3) TNZ Class 9, PAT Type 69, 6 axle artic and the TNZ Class 11, PAT Type 791, 7 axle artic are legally limited to below 44 Tonne Gross, but may be operating on overweight permits at 44 Tonne Gross.

2.0 INTRODUCTION

There are five Weigh in Motion (WiM) sites in New Zealand collecting axle loading data for use nationally in traffic monitoring. An additional source of WiM data is being developed in Auckland and this project will include the provision of loading data to the national system.

The current sites are as follows:

Table 1.0 | WiM Site Locations

Region	SH	RS	Description
02 - Auckland	1N	461	DRURY -Telemetry Site 48 - (WiM Site 1205)
03 - Waikato	1N	625	TOKOROA - Telemetry Site 51 - (WiM Site 421)
04 - Bay of Plenty	2	171	TE PUKE - Telemetry Site 49 - (WiM Site 24)
06 - Hawkes Bay	5	259	ESKDALE* - Telemetry Site 101 - (WiM Site 5721)
11 - Canterbury	1S	284	WAIPARA - Telemetry Site 52 - (WiM Site 518)

*Eskdale WiM site data collection was started in July 2010.

All data used within this report was collected within the 2010 calendar year and is available to selected users, within the NZTA's State Highway Traffic Monitoring System (TMS). This report is proposed to provide an insight into what is available for further, more detailed analysis, to be undertaken by TMS users.

3.0 OTHER DOCUMENTS

The documents below will provide useful information relating to Traffic Monitoring practices used on State Highways by the NZ Transport Agency. These can be downloaded from our website. www.nzta.govt.nz

- Traffic Monitoring for State Highways Manual SM052
- State Highway Traffic Volume Booklet

4.0 TECHNOLOGY

NZTA is using the PAT bending plate technology at a total of five WiM sites and two further sites at the Auckland Harbour Bridge are used for a special study. All sites are continuously collecting individual truck records and statistics generally downloaded weekly.

The first system was installed in 1985 at Pukurua Bay near Wellington, then relocated to Te Puke in the Bay of Plenty in 1997. Four of the original bending plates are still in operation.

The Eskdale site is the newest WiM site located in Hawkes Bay. WiM data collection started on this site in July 2010.

5.0 DATA QUALITY REQUIREMENTS

Readers of this report should take note of the accuracy tolerances required during the collection of data.

Accuracy or precision is as defined for high speed weigh in motion in ASTM E 1318 (or latest revision):

For 95% of conformity:

Gross Vehicle Weight: $\pm 10\%$

Axle group load: $\pm 15\%$

5.0 DATA QUALITY REQUIREMENTS (Continued)

With a good (new) pavement, the above weight errors are reduced by a factor of 1.5

Requisite quality is determined by the final use of data, in simple terms:

- Pavement is periodically checked for level and rectified
- Calibration is carried out with vehicle of known axle weights and speed.
- Data is monitored for errors and deviation.

Current use of data:

- Average ESA's for pavement design.
- Load distributions for bridge design.
- Network loading analysis.
- Indicators for Police Enforcement.

Potential future use of data:

- Assessments of revenue from Road User Charges.

Other factors affecting data accuracy

- Pavement smoothness. Trucks bouncing onto scales will affect accuracy.
 - Truck Driver Behavior
 - Strong Winds etc
-

6.0 OVERWEIGHT DERIVATION

This report contains the number of overweight vehicles data by vehicle type (PAT class rigid, T&T and others). The data has been sourced from the 'Distribution by Gross Vehicle Mass' report in the TMS.

Overweight data in each vehicle fleet category is computed based on the specified weight limit of the vehicle. For example, vehicle fleet of PAT class 21 legal limit is 14 tonnes. To derive the number of overweight vehicles for this fleet the sum of total number of vehicles with loads ranges from 15-16 up to >60 tonnes (the maximum weight category).

In order to compute the number of overweight vehicles by vehicle type, simply take the sum of the overweight vehicles in all vehicle fleets which belong to a certain vehicle type. (*refer to Table 5 for the classification scheme*) For example, in 2010 there were 127,311 rigid heavy vehicles recorded at the Waipara WiM site. This is the sum of all PAT class (20, 21, 31, 34, 45, and 47) under rigid type. For the overall total overweight vehicles, simply add all the overweight vehicles in all WiM sites.

7.0 PERMITTED VEHICLES

Within this report, permitted vehicles were not identified separately. A small proportion of the vehicles identified as being overweight will be operating under a permit.

TNZ Class 9, PAT Type 69, 6 axle artic and the TNZ Class 11, PAT Type 791, 7 axle artic are legally limited to below 44 Tonne Gross, but may be operating on overweight permits at 44 Tonne Gross.

8.0 EXECUTIVE SUMMARY

All heavy vehicles are referred to as vehicles in this report.

Table 2.0 | Vehicle Frequency by Vehicle Type

Vehicle Type	Total Heavy Vehicles Recorded	% ⁽¹⁾ Total Heavy Vehicles	Overweight Vehicles (Vehicle Type)	% ⁽¹⁾ Overweight Vehicles (Vehicle Type)	% ⁽²⁾
Rigid	955,091	39.3	20,416	8.9	2.1
T&T	900,445	37.1	154,332	67.3	17.1
Artic	353,661	14.6	29,426	12.8	8.3
A&B Train	221,129	9.1	25,296	11.0	11.4
Total	2,430,326	100.0	229,470	100.0	9.4

Note: ¹The proportion of each vehicle type from the overall total. For example, more than 67 percent of the overall total of overweight vehicles recorded as T&T vehicles.

²The proportion of number of overweight vehicles over the total heavy vehicles recorded of each vehicle type. For example, approximately 8 percent of 353,661 Artic type vehicles were overweight.

Vehicle Fleet

- PAT class 891, 21 and 31 (see Figure 1) reported as having the largest portion of vehicles across all five WiM Sites (combined they account for approximately 50 percent of the heavy vehicle fleet) (see Table 7.0)
- In terms of vehicle type, rigid (39.3 percent) and T&T (37.1 percent) have the highest number of heavy vehicles. (see Table 2.0)

Vehicle Fleet Overweight

- PAT class 891 (46.7 percent), 751 (16.6 percent) and 851 (8.7 percent) have the largest portions of vehicles recorded as being over their specific vehicle type limit (combined approximately 72 percent of the total heavy vehicles recorded as overweight) (see Table 10.0)
- In the long-term trend (2001-2010), PAT class 891 showed an increasing trend while PAT class 751 and 851 reported decreasing trends (see Chart 6.0)

- Table 3 shows the number of heavy vehicles, overweight vehicles, and percentage distribution of overweight vehicles at each WiM site:

Table 3.0 | Heavy Vehicle Type by WiM Site (2010)

Vehicle Type	WiM Site					Total
	Drury	Eskdale*	Te Puke	Tokoroa	Waipara	
Number of Heavy vehicles

T&T	37,056	13,259	60,233	21,039	22,745	154,332
Artic	9,022	910	14,421	3,182	1,891	29,426
A&B Train	7,193	1,076	7,958	4,305	4,764	25,296
Total	62,497	15,777	88,824	30,835	31,537	229,470
Percentage of overweight vehicles (%)						
Rigid	2.3	1.7	2.3	1.7	1.7	2.1
T&T	12.2	39.1	27.2	10.5	16.2	17.1
Artic	5.5	10.6	17.8	5.4	4.6	8.3
A&B Train	9.7	16.4	22.2	7.5	10.0	11.4
Total	6.7	19.8	14.7	6.8	8.8	9.4

* Eskdale WiM site data collection was started in July 2010. So, the quantity of data represents 6 months.

Interpretation: At Waipara WiM site 41,130 Artic type vehicles were recorded, with 1,891 (4.6 percent) recorded as overweight vehicles. Of all the heavy vehicles recorded at the Te Puke WiM site there were 14.7 percent were overweight.

- The T&T vehicle type (154,332) has the highest number of overweight vehicles across all WiM sites, followed by Artic (29,426), which were evident at the Drury and Te Puke WiM sites (see Table 3.0)

Figure 1.0 | PAT type 21, 31, 891, 751 and 851

PAT type 21:

PAT type 31:

PAT type 891:

PAT type 751:

PAT type 851:

Vehicle Fleet > 44T/48T

- PAT class 891, 751 and 851 (see tables 13.0 and 13.1) represent the largest frequencies of heavy vehicles recorded at both >44T and >48T (combined they account for approximately 85 percent of the total heavy vehicles recorded for both >44T and >48T, respectively).

Time of Day

- Table 4.0 indicates the times overweight vehicle frequencies peak at each WiM site during an average day:

Table 4.0 | Overweight Peak Distribution Times by WiM Site (Start to End)

WiM Site	Start	End
Drury	05:00 - 05:59	17:00 - 17:59
Tokoroa	06:00 - 06:59	17:00 - 17:59
Te Puke	05:00 - 05:59	17:00 - 17:59
Waipara	06:00 - 06:59	16:00 - 16:59
Eskdale*	05:00 - 05:59	16:00 - 16:59

*Eskdale WiM Site data collection was started in July 2010.

- The peaks may represent long-hauls reported across two or more WiM Sites, the smaller peaks may represent local distribution (see Charts 3.0 - 3.4).
- Across all WiM sites, overweight PAT class 891 recorded as >48 Tonnes started to peak in the afternoon except for the Te Puke that started earlier (see Charts 4.0-4.4).

9.0 CLASSIFICATION SCHEME

Table 5.0 | Heavy vehicle classification scheme

PEM Class	NZTA 2011	TNZ Class	PAT Class	Vehicle Type	Axles	Length Range (WiM data)	RUC Class	Group	Axle Group (Pave. Des.)	
MCV	4	3	20	o-o (wb2.0-3.2m, gw>=3.5t)	2	4m-11m	2	RIGID

14	14		Not Classified							

Symbol: na not applicable

* TNZ 1999 PAT class 40 was split into two categories in the new NZTA 2011 classifications. The car towing car (o-o--o-o) gone to vehicle type class 3 while the truck tow heavy trailer (o--o--o--o) classified as vehicle type class 7.

Announcement: The new NZTA 2011 heavy vehicle classification scheme was implemented early in 2011. Therefore, the next WiM 2011 annual report will be using the NZTA 2011 classification as its output category. The changes in classification are reflected in the table above.

10.0 ANNUAL AVERAGE DAILY TRAFFIC (AADT) BY SITE

AADT provides an estimation of the number of vehicles crossing a site on an average day.

% Heavy

The % Heavy column provides an estimate of the proportion of the AADT, deemed a heavy vehicle: i.e. greater than 3.5 tonnes for the current year.

Table 6.0 | Annual Average Daily Traffic by WiM Site

WiM Site	SH	AADT (2010)	Number of heavies per day	% Heavy
Drury - Telemetry Site 48	1N	40,740	4,318	10.6
Tokoroa - Telemetry Site 51	1N	8,470	1,355	16.0
Te Puke - Telemetry Site 49	2	19,143	1,857	9.7
Waipara - Telemetry Site 52	1S	7,479	1,055	14.1
Eskdale - Telemetry Site 101	5	3,438	574	16.7

(Source: State Highway Traffic Data Booklet 2005-2010, to be published April 2011)

11.0 VEHICLE FLEET DISTRIBUTION TABLES

PAT Class – This is the code relating to the axle configuration.

Description – This illustrates the PAT type by providing an indication of the spacing between axles.

Total Volume – This indicates the number of heavy vehicles for each PAT class.

Table 7.0 | Heavy Vehicles Frequency and Percentage Distributions by Vehicle Type, by PAT Class, and by WiM Site

Symbol: - no data

Note: ¹Percentage of each PAT class from the total number of heavy vehicles per WiM site.
²Percentage of each WiM site total from the overall total of heavy vehicles at all WiM sites (2,430,326).

Interpretation: At the Tokoroa WiM site, 6.7 percent (30,143) of all heavy vehicles were PAT type 45. The Drury WiM site has recorded 38.5 percent (935,999) of the overall total vehicles at all sites.

Symbol: - no data

Note: ¹The selection of PAT class was based on the highest frequency recorded in the current year.
²Eskdale WiM site data collection was started in July 2010. So, the quantity of data represents 6 months.
³All not stated PAT class were included in 'Others' category.

12.0 VEHICLE FLEET OVERWEIGHT TABLES

PAT Type – This is the code relating to the axle configuration

Description – This illustrates the PAT type by providing an indication of the spacing between axles.

Total Overweight – This indicates the number of heavy vehicles overweight for each PAT type.

Symbol: - no data

Note: ¹The selection of PAT class was based on the highest frequency recorded in each year.
²Eskdale WiM site data collection was started in July 2010. So, the quantity of data represents 6 months.
³All not stated PAT class were included in 'Others' category.

13.0 VEHICLE FLEET >44T/48T DISTRIBUTION TABLES

PAT Type - This is the code relating to the axle configuration.

Description - This illustrates the number of axles and an indication of the spacing between axles.

Note: ¹Percentage of each PAT class from the total number of heavy vehicles recorded as >48T per WiM site.
²Percentage of each WiM site from the overall total number of heavy vehicles recorded as >48T at all WiM sites (23,276).

Interpretation: At the Drury WiM site, PAT class 751 vehicles reported 1,051 (22.0 percent) with loads recorded as >48T. Of the five WiM sites the Te Puke WiM site has the highest heavy vehicles frequency, with 46.9 percent of the total heavy vehicles recorded at over 48T.

14.0 AXLE GROUP DISTRIBUTION TABLES

Load (kN) – This is the load imposed by each axle type.

Table 14.0 | Axle Group Approximate Load Limit

Axle Group	Approximate Load Limit (kN)
SAST - Single Axle Single Tyre	60
SADT - Single Axle Dual Tyre	60
TADT - Tandem Axle Dual Tyre	-
TSST - Twin Steer Single Tyre	-
TRDT - Triple Axle Dual Tyre	160
QADT - Quad Axle Dual Tyre	200

It is important to note that the weigh-in-motion (WiM) data from which the following table is derived, cannot distinguish between single and dual tyres. It is assumed that steer axles are single tyred and all others are dual tyred. From observation, there is an increase in the utilisation of 'super single' type tyres in the SADT, TADT, TAST and TRDT groups, however, the impact or significance can not be measured or derived from this technology. Despite the QADT description, 80-90% of Quad Axles are single tyred. The highlighted sections indicate the peaks in load per axle group.

15.0 APPENDIX A - HEAVY VEHICLES LOAD FREQUENCY DISTRIBUTION BY WiM SITE CHARTS

Chart 1.0 | Heavy Vehicle Load Frequency Distribution at the Drury WiM Site

Interpretation: The number of heavy vehicles at the Drury WiM site in 2010 has decreased compared to 2009. There were similar patterns in the first two peaks, which occur approximately at 3-6 and 15-19 tonnes. However, the third peak happened at 38-45 tonnes in 2009, but at 41-46 tonnes in 2010. As the weight reaches 46 tonnes or more, the number of heavy vehicles was higher in 2010 than in 2009.

Note: Maximum legal limit except for the small proportion of vehicles which are operating on overweight permits.

15.0 APPENDIX A - VEHICLE FLEET DISTRIBUTION CHARTS (Continued)

Chart 1.1 | Te Puke

Note: Maximum legal limit except for the small proportion of vehicles which are operating on overweight permits.

15.0 APPENDIX A - VEHICLE FLEET DISTRIBUTION CHARTS (Continued)

Chart 1.2 | Tokoroa

Note: Maximum legal limit except for the small proportion of vehicles which are operating on overweight permits.

15.0 APPENDIX A - VEHICLE FLEET DISTRIBUTION CHARTS (Continued)

Chart 1.3 | Waipara

Note: Maximum legal limit except for the small proportion of vehicles which are operating on overweight permits.

15.0 APPENDIX A - VEHICLE FLEET DISTRIBUTION CHARTS (Continued)

Chart 1.4 | Eskdale

Note: Eskdale WiM site data collection was started in July 2010. So, the quantity of data represents 6 months.
 Maximum legal limit except for the small proportion of vehicles which are operating on overweight permits.

16.0 APPENDIX B - PAT CLASS 891 LOAD FREQUENCY DISTRIBUTION BY WiM SITE CHARTS

Chart 2.0 | Drury

Interpretation: PAT class 891 had the highest number of heavy vehicles of any class at the Drury WiM site. In comparing to 2009 figures, 2010 show decreases from <12 to 46 tonnes. The third highest peak concentrated in the weight 41-45 tonnes in 2009, while in 2010 it went further to 42-46 tonnes. This also shows that in 2010 there were more PAT Class 891 vehicles carrying more than 46 tonnes compared to 2009.

Note: Maximum legal limit except for the small proportion of vehicles which are operating on overweight permits.

16.0 APPENDIX B – PAT CLASS 891 LOAD FREQUENCY DISTRIBUTION BY WiM SITE CHARTS (Continued)

Chart 2.1 | Te Puke

Note: Maximum legal limit except for the small proportion of vehicles which are operating on overweight permits.

16.0 APPENDIX B – PAT CLASS 891 LOAD FREQUENCY DISTRIBUTION BY WiM SITE CHARTS (Continued)

Chart 2.2 | Tokoroa

Note: Maximum legal limit except for the small proportion of vehicles which are operating on overweight permits.

16.0 APPENDIX B – PAT CLASS 891 LOAD FREQUENCY DISTRIBUTION BY WiM SITE CHARTS (Continued)

Chart 2.3 | Waipara

Note: Maximum legal limit except for the small proportion of vehicles which are operating on overweight permits.

16.0 APPENDIX B – PAT CLASS 891 LOAD FREQUENCY DISTRIBUTION BY WiM SITE CHARTS (Continued)

Chart 2.4 | Eskdale

Note: Eskdale WiM site data collection was started in July 2010. So, the quantity of data represents 6 months.
 Maximum legal limit except for the small proportion of vehicles which are operating on overweight permits.

17.0 APPENDIX C - VEHICLE FLEET OVERWEIGHT CHARTS

The following charts depict the time of day distribution of the vehicle fleet deemed overweight at each site.

Chart 3.0 | Drury

Chart 3.1 | Eskdale

Chart 3.2 | Te Puke

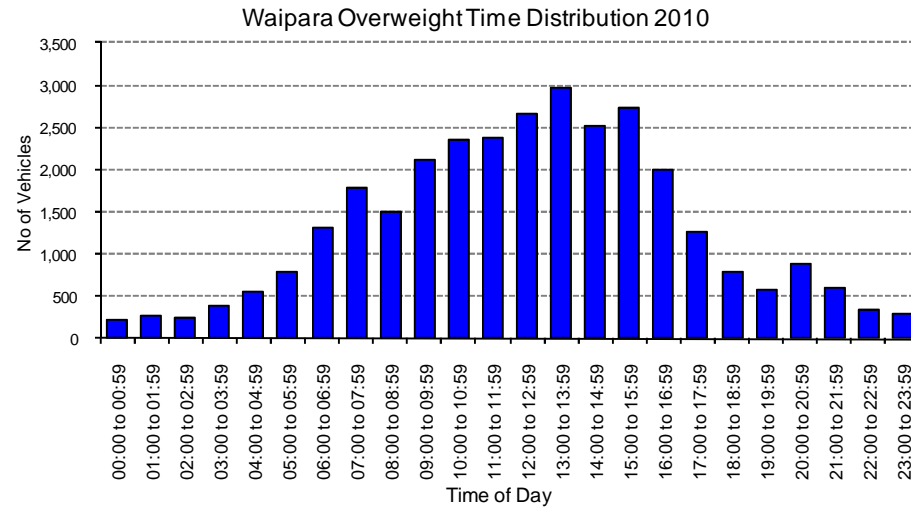

Chart 3.3 | Tokoroa

17.0 APPENDIX C - VEHICLE FLEET OVERWEIGHT CHARTS (Continued)

Chart 3.4 | Waipara

Interpretation: Drury WiM site reported two peaks in frequency/time distribution of overweight vehicles. The peaks occur at approximately between 06:00 - 06:59 and 13:00 - 13:59. The peak at Tokoroa may exist as a result of a long-haul delay from the peak in Drury.

18.0 APPENDIX D - PAT CLASS 891 OVERWEIGHT CHARTS

The charts below show the number of PAT class 891 recorded as more than 48 Tonnes across 24 hour period at each site.

Chart 4.0 | Drury

Chart 4.1 | Eskdale

Chart 4.2 | Te Puke

Chart 4.3 | Tokoroa

18.0 APPENDIX D – PAT CLASS 891 OVERWEIGHT CHARTS (Continued)

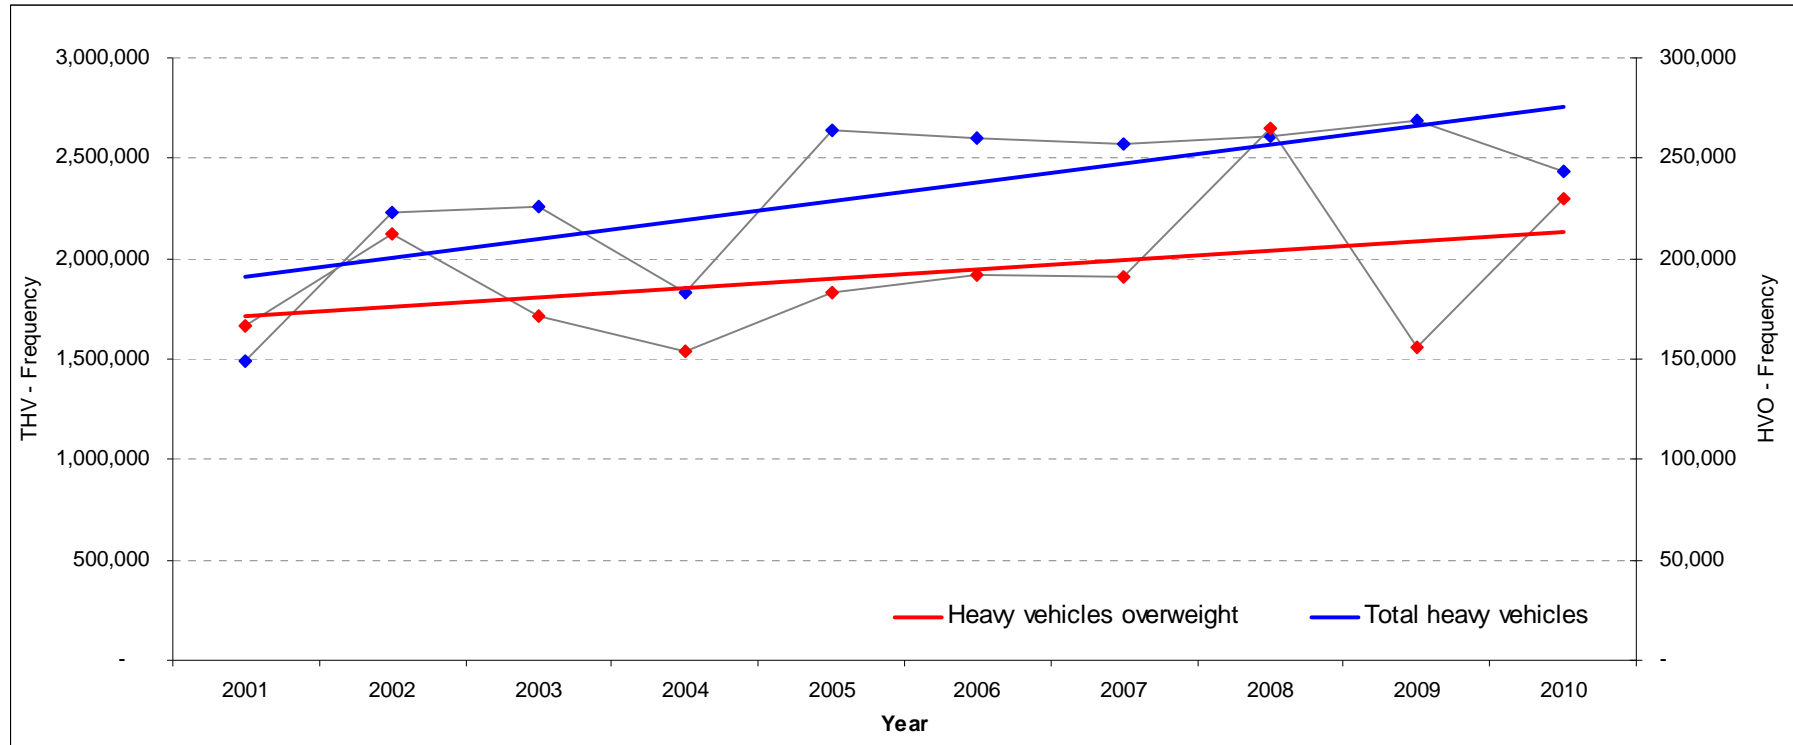

Chart 4.1 | Waipara

Interpretation: Across all WiM sites show that overweight PAT Class 891 recorded greater than 48 Tonnes peaks in the afternoon except for Te Puke that started earlier.

19.0 APPENDIX E - HEAVY VEHICLES LOAD/OVERWEIGHT TRENDS

Chart 5.0 | Heavy Vehicle Load/Overweight Trends

Interpretation: Both total heavy vehicles and overweight vehicles frequencies show a long term increasing trend in the 10-year period. In 2010, the total vehicles frequency decreased from the previous year; while the number of heavy vehicles overweight increased, which was similar in 2006. This scenario is contrary to 2003 and 2009 where the total vehicle frequencies increased from the previous year, while the number of heavy vehicles overweight decreased.

20.0 APPENDIX F - VEHICLE FLEET TRENDS

Chart 6.0 | Growth in Vehicle Fleet Frequencies by PAT Class (2001–2010) at All WiM Sites - Trend Analysis

Interpretation: The three most frequent PAT classes (891, 21, and 31) show an increasing trend in the long-term. However, all have experienced decreases in 2010. PAT class 891 has reported a big decrease from 2009, but in 2010 still represents significant number of heavy vehicles in the fleet.

21.0 APPENDIX G - VEHICLE FLEET OVERWEIGHT TRENDS

Chart 7.0 | Growth in Vehicles Recorded as Overweight (2001–2010) by PAT Type at All WiM Sites (Three most commonly recorded as overweight.)

Interpretation: PAT class 891 continues to report an increasing overweight trend, whereas both PAT class 751 and 851 report an overweight frequency that indicate possible decreasing trends.

22.0 APPENDIX H - VEHICLE FLEET FREQUENCY vs OVERWEIGHT CHARTS

Chart 8.0 | Vehicle Load Frequency vs. Overweight Frequency (2001–2010) PAT Type 891 at All WiM Sites (Most commonly recorded as overweight.)

Interpretation: There exists a possible positive correlation between the frequency of heavy vehicles and the frequency of heavy vehicles overweight. The two plots both indicate a long term increasing trend from 2001 – 2010. However, this PAT class shows a decrease in frequency in 2010 while the number of overweight rebounds from a dip in 2009.

22.0 VEHICLE FLEET FREQUENCY vs OVERWEIGHT CHARTS (Continued)

Chart 8.1 | Vehicle Load Frequency vs. Overweight Frequency (2001-2010) PAT Type 751 at All WiM Sites

Chart 8.2 | Vehicle Load Frequency vs. Overweight Frequency (2001-2010) PAT Type 851 at All WiM Site
